Hiring Team
[Company Name]

Dear Hiring Team,

I am writing to apply for the [Role Title] position at [Company Name]. Over the past 25 years I have shipped production software across .NET/backend engineering, AI-agent infrastructure, cloud, and security — most recently building Model Context Protocol (MCP) servers and autonomous agents and architecting ML pipelines for an AI startup. I would bring that range, and a strong bias toward shipping working software, to your team.

What draws me to this role is that I am already building in this space, not just reading about it. I have shipped four security-hardened MCP servers — exposing Kali Linux tooling and search APIs to AI agents, with refuse-list guards and audit logging on every call — plus a personal agent framework with persistent memory and multi-provider LLM fallback, and memory tooling for Claude Code. I work daily with the Anthropic and OpenAI APIs, tool-use/function-calling, RAG, and local models, and I ship it as real, open-source code you can read today at github.com/CryptoJones.

I am based in central Nebraska and work effectively remote, as I have for most of the past decade, or on-site within the region. I would welcome the chance to talk about how I can contribute to [Company Name].

Thank you for your time and consideration.

Sincerely,

Aaron K. Clark
